

Stairsteps

We recommend the use of "Stairsteps" to quickly stabilize an unstable vehicle.

Standard stairsteps are easily constructed with one 10' piece of 2" x 6" lumber. To prevent slippage it is recommended to leave wood unpainted. Treated lumber is acceptable.

Materials Required for Construction

- 1 2" x 6" x 7 1/2"
- 2 2" x 6" x 15"
- 1 2" x 6" x 22 1/2"
- 2 2" x 6" x 30"

It is recommended to construct the stairsteps with the 30" pieces first and work up by using a bonding agent and 3" deck screws. Nails are not recommended because of the tendency for them to expose themselves under heavy use.
